Common WoW
Open Gateway and CAMARA

OGW Product Workstream & CAMARA
Roles and responsibilities

Base agreements

Base requirements for the API definition

- **CAMARA** is the **preferred repository** where companies & operators specify the **developer-facing APIs,** for those OGW services targeting developers, making sure their semantics are dev-friendly.
- **CAMARA should define one unified API or set of APIs** for each OGW service. Situations in the past (e.g. two API flavours Carrier Billing) should be avoided, since **OGW looks for homogeneity**.
- **CAMARA is charged with the complete evolution** and versioning/maintenance of the APIs.

Responsibilities of operators or companies participating in:

GSMA OGW Product Portfolio WS	• Defining OGW services, specifying product features and listing applicable (covered) use cases. This information is captured in the OGW service descriptor. • Maintaining these OGW services in a 'wish-list', and prioritise them according to different criteria (e.g., technical readiness, mass of developers, industry interest, etc.). • Inserting prioritised OGW services into CAMARA backlog → **MNO Product Owner** • Providing support on any market/product question from CAMARA Sub-Projects → **MNO Product Owner**
CAMARA LF	• Defining APIs for OGW services captured in the CAMARA backlog. These APIs can include "Service APIs" and "Service Mgmt APIs". • Managing versioning of APIs.

CAMARA API lifecycle

API "scope enhancement proposal"

NEW OGW API/SERVICE Request

NEW non-OGW API/SERVICE Request

- From OGW or external
- Also new features

API BACKLOG WG

- Validation of request (template)
- Validation of supporters
- Avoid overlap with existing APIs
- Fit proposals in existing WG or propose new
- Propose API name

TSC

- Final API approval
- Creation of subgroup (if needed)

API Subgroup

- Use cases definition (close API scope)
- Flows description
- API *yaml
- API ATPs
- API documentation

Proposal joint WoW between OGW and CAMARA

	Activity	GSMA			CAMARA		
		Open Gateway Product Portfolio WS	MNO Product Owner	Local Market Champion	CAMARA Backlog WG	CAMARA sub-project (repo)	TSC
GSMA OGW Specific GSMA Open Gateway procedure to jointly prioritize new services	1. **(OGW Service Nomination)**** Propose OGW high-level service definition, including scope and naming	C / R	A / R	R	-	-	-
	2. **(OGW Service Prioritization)** Identify OGW priority items	A / R	I	I	-	-	-
	3. **(OGW Service Submission)** Submit OGW service into CAMARA, using CAMARA API template	I	A / R	-	I	-	-
CAMARA Backlog Generic CAMARA flow for any request (OGW and others), to be formalized and agreed in CAMARA	4. **(Supporters declaration)** Declare company support to API submissions Note: It is encouraged for supporting companies to be included in the application template at submission time (3). *At least 2 MNOs required, active supporters*	R	R	-	A	-	-
	5. **(API Proposal Approval)** Finalise and approve API proposal, with agreed scope and naming (Product and Technical resources) and nominated codeowners/maintainers	I	C	-	A / R	C	C
	6. **(API Definition)** Contribute to the API definition in CAMARA (Technical resources + ad hoc Product resources support)	I	R	-	I	A / R	-
	7. **(API Validation)** API test plans definition. In case of OGW, GSMA will perform the certification process (certification execution not showed in RACI)	I	R	-	I	A/R	-
	8. **(API Evolution)** Evolve the API definition*	I	R	-	A / R	R	C
GSMA OGW	9. **(API Commercialization)** Implement and commercially launch the defined GSMA OGW service	I	-	A/R	-	-	-

*If the sub-project proposes to include a new feature or capability, the proposal is labelled as "scope enhancement proposal (draft)" in CAMARA. CAMARA Governance information to be checked

** Companies remain free to submit proposals to CAMARA independently from GSMA Open Gateway initiative.

Proposal joint WoW between OGW and CAMARA

REQUIRED ACTIONS

GSMA OGW (Product):
1. (Service Nomination)** → To provide a detailed description of the services to ensure proper prioritization.
2. (Service Prioritization) → N/A
3. (API Submission) required → Two operators to support each proposal, since 2 active maintainers (Github) are

CAMARA:
4. (API Supporters declaration) → N/A
5. (API Proposal Approval) → N/A
6. (API Definition) → API definition to be tracked in the CAMARA backlog table (status)
7. (API Validation) → API Test Plans (ATP) to be defined during the API definition
8. (API Evolution) → API proposals that affect the agreed scope during approval process will require to be validated following the backlog procedure. "scope enhancement proposal" label to be included for those new issues.

GSMA OGW:
9. (API Commercialization) → N/A

*If the sub-project proposes to include a new feature or capability, the proposal is labelled as "scope enhancement proposal (draft)" in CAMARA. CAMARA Governance information to be checked
** Companies remain free to submit proposals to CAMARA independently from GSMA Open Gateway initiative.
